

TECHNICAL ADVISOR / SENIOR RESEARCH ANALYST

About Us: The Research and Evaluation Group (EvalGroup) is a team of researchers and program evaluators that are dedicated and committed to providing our clients with necessary and valuable data and information to make informed decisions to improve their programs and organization. We provide data-driven analysis to help organizations understand the results of their programs and initiatives—and translate that data into actionable improvements. Our expertise spans a wide range of social impact areas, such as healthcare, social services, community development, educational achievement, arts and culture, and violence prevention. Consulting services provided by our firm include program evaluation, coordination, strategic planning, community engagement, communications, and capacity-building.

Responsibilities:

- Perform statistical analyses of data and design research report monographs on key findings
- Monitors data analytic plans and recommends changes when necessary, ensures data analyses are performed accurately and completely and implement changes to study methods
- Perform complex multivariate analyses and write clear, concise documents, which logically and effectively convey information; create charts and graphs; and prepare presentations, reports, peer-reviewed journal articles, and other appropriate media as required
- Develop and execute analytical methods that are accurate and factual, and reports data findings that are compliant with federal and state regulations and/or institutional policies
- Work effectively within a group setting in areas of design of data collection instruments, database management, analysis of data, and creation of reports
- Documenting methods and results through creation and maintenance of standard documentation artifacts including data dictionaries, standard operating procedures and analysis methodology descriptions

Required Education/Experience:

Required:

- PhD in statistics, econometrics, or relevant social science discipline from an institution accredited by one of the regional institutional accreditation agencies recognized by the U.S. Secretary of Education.
- Candidates must possess an excellent understanding of statistical principles and research methods, both quantitative and qualitative.
- Must have a minimum of fifteen (15) years of experience conducting quantitative research and statistical analyses. Experience must include research on and analysis of public health and safety topics specifically on vulnerable populations.
- Must have a minimum of 3 years of experience working with federal government agencies (HHS and/or DoEd preferred)

Preferred Experience:

- A strong portfolio of grant funding (as PI or Co-PI) preferred but a strong record of contract research and management will be strongly considered; Knowledge of sampling statistics, statistical weighting, and survey instrumentation development and testing preferred.
